Introduction Note

This Initiative

The Startup Founder Prompt Pack is part of Invest Ottawa's commitment to helping founders build, launch, and scale stronger companies in the age of AI.

It's designed to make AI accessible, practical, and valuable — right now — giving every founder a faster path from idea to impact.

The Startup Founder Prompt Pack

Command AI. Unleash Founders.

You move fast. AI moves faster.

This pack helps you turn that speed into momentum — using AI as a thinking partner, not just a productivity tool.

What This Is

The **Startup Founder Prompt Pack** is a practical toolkit for founders who want to move faster, think sharper, and scale smarter with AI.

Each prompt focuses on a real founder use case — from shaping your story to refining your strategy to accelerating customer growth.

These prompts are **intentionally simple and straightforward.**

They're designed so you can drop them into ChatGPT, add a few quick inputs, and get a useful, relevant output in minutes — not hours.

They're built to help you take action fast, not get stuck in setup or complexity.

Think of these as your **Minimum Viable Prompts (MVPs)** — just like a *minimum viable product*, they're a *starting point*, not the final form.

Use them exactly as they are, build on them with your own context, or collaborate with AI to evolve them into something more sophisticated and tailored to your business.

Simple by design. Powerful in practice.

The more you use them, the better you'll get at thinking *with* AI — not just prompting it.

Why It Matters

AI is now a core leadership skill — as essential as communication or financial literacy.

Founders who learn how to delegate, ideate, and problem-solve with AI gain time, clarity, and creative leverage.

This pack helps you:

- Turn a rough idea into a workable plan — fast
- Delegate repeat founder tasks while keeping vision and judgment human
- Use AI as a second brain to challenge, sharpen, and accelerate your thinking

How to Use This Pack

1. **Start with the Need, Not the Tool.**
2. Browse the categories (e.g., *Product & Validation*, *GTM & Sales*, *Metrics & Analytics*). Choose the one that fits what you're working on *right now.*
3. **Copy the Prompt Into ChatGPT.**
4. Paste it in exactly as written. Follow the adaptive questions — they're there to pull in your context naturally.
5. **Experiment and Iterate.**
6. Add details. Adjust tone. Layer in your data. The more you feed it, the smarter and more relevant your results become.
7. **Reflect and Evolve.**
8. Each prompt ends with a reflection and a 💡Pro tip. Use them to build your *AI thinking muscle* — and make each run better than the last.

💡**Pro tip: Start simple. Stay curious. The real skill is in the iteration.**

How to Navigate

Prompts are grouped into key founder focus areas:

- **Product & Validation** — find and test what matters
- **GTM & Sales** — grow faster with sharper positioning
- **Metrics & Analytics** — see what's working, fix what's not
- **Ops & Hiring** — scale with systems, not stress
- **Content & Social** — amplify your message with clarity
- **Support & Success** — keep customers and teams aligned

Each prompt includes:

- A **Purpose** — what it's for and when to use it
- Clearly labeled **Input / Process / Deliver** sections
- A short **Example Output** showing what "good" looks like

Invest Ottawa's Commitment

This Prompt Pack is part of **Invest Ottawa's ongoing support for startup founders** — helping you move from *startup to scale-up* with clarity, speed, and confidence.

As AI reshapes how every business operates, Invest Ottawa is deepening its focus on helping founders **leverage AI as a core advantage** — not an afterthought.

This first release is our *Minimum Viable Product* for AI enablement — a simple, accessible way to get started and experience real value quickly.

And like any good MVP, we'll build the next version based on what you tell us works best.

Give Us Your Feedback

Tell us which prompts helped you most, where you want more depth, and what else would make this toolkit more valuable.

Together, we'll grow this into an even more powerful AI resource for founders at every stage.

From all of us at Invest Ottawa — we're excited to see how you put these prompts to work and where AI helps you go next.

A Final Word

Think of this pack as your **AI co-founder in training.**

Start small. Use it often.

The real value isn't just in the answers it gives — it's in how it helps you ask *better questions.*

> *Together, we're building the next generation of AI-native founders — curious, capable, and future-ready.*

The Six-Part Micro-Enhancement Framework

Principle	Description	Why It Matters
A – Context Capture	Invites optional personalization (URL, product summary, or data sample).	Keeps answers relevant to each founder's business.
B – Multi-Source Awareness	Works even when data is missing ("If I provide none…").	Prevents dead ends and reduces friction.
C – Output Enrichment	Produces structured artifacts — tables, clusters, or checklists.	Makes results easy to read and reuse.
D – Reflection Prompt	Ends with a single interpretive question.	Turns information into insight.
E – Action Prompt	Adds a "Pro tip" or micro next step.	Moves the founder from insight to action.
F – Adaptive Questioning	Begins with 1–3 short discovery questions when context is missing.	Makes the prompt feel conversational and intelligent.

The Process

1 **Audit** — Each of the 26 prompts was scored against the five original principles to locate weaknesses in adaptability and reflection.

2 **Design** — Introduced the sixth principle, *Adaptive Questioning*, to make the experience interactive.

3 **Enhancement** — Applied a standardized Context Block and Enhancement Command to automatically rebuild every prompt within ChatGPT.

4 **QA & Verification** — Each prompt was tested using a 14-point structural checklist and a conversational smoke test.

5 **Documentation** — All example outputs, sources, and quality notes were preserved for traceability.

🧩 Outcome: All 26 prompts now meet a consistent quality bar — adaptive, reflective, and founder-relevant — and can serve as a reusable model for future prompt libraries.

Step-by-Step Process

1️⃣ **Open a new ChatGPT thread**

→ Always start fresh to clear previous context.

2️⃣ **Paste the Context Block**

→ This sets the governing framework and quality bar.

3️⃣ **Paste the Enhancement Command**

→ This tells the model to read your full original prompt entry and apply the framework.

4️⃣ **Paste (or upload) the full original prompt**

→ Include everything from the title through the example output and source metadata.

5️⃣ **Click Send / Run**

→ The model will automatically parse, ask clarifying questions if context is missing (Adaptive Questioning), and then generate the enhanced version.

6️⃣ **Paste the Structural QA Check**

→ Run this to verify that the enhanced output meets all framework standards.

7️⃣ **If any ❌ appear**, tell the model:

> "Fix all failed items and re-post the full corrected founder-facing deliverable."

8️⃣ **When all ✅**, copy the final deliverable into your master document or Notion page.

9️⃣ **Optionally run the Human QA / Smoke Test**

→ Confirm that the prompt behaves interactively and produces high-quality, founder-relevant outputs.

Step 1: Context Block

```
SYSTEM / GOVERNING CONTEXT — MICRO-ENHANCEMENT FRAMEWORK (INVEST OTTAWA v4.1)

Goal:
Upgrade a founder-facing AI prompt so it is adaptive, conversational, and founder-relevant while
remaining simple and runnable in one go.

Framework (apply all six principles):
A) Context Capture — invite optional personalization (product, URL, stage).
B) Multi-Source Awareness — if no data, include fallback ("If I provide none…").
C) Output Enrichment — deliver structured artifacts (tables, clusters) using **Input / Process /
Deliver**.
D) Reflection Prompt — end with one interpretive question ("Which feels most true or off — and w
hy?").
E) Action Prompt — include one next step ("Pro tip") for applying the insight.
F) Adaptive Questioning — if required context (product, audience, goal) is missing, ask 1–3 conc
ise discovery questions before generating output.

Formatting & Tone:
- Warm, practical, conversational (founder-to-founder).
- One runnable code block with **Input / Process / Deliver** headings.
- Include one short "Example output" line under *You'll Get*.
- No {{placeholders}}; use natural phrasing.

Expected Output Layout:
A) Founder-Facing Deliverable
   1 Title & Category
   2 Purpose (from Use Case)
   3 Enhanced Prompt (Input / Process / Deliver + fallback + reflection + adaptive Q)
   4 You'll Get (2–3 outcomes + example line)
   5 Example Output (from original)
   6 Pro tip
B) Internal Metadata (Source / Author / License / Date / Quality Score)

Reset instruction:
🔁 Start a new chat for each prompt.
```

Step 2: Enhancement Command

```
ENHANCE THIS PROMPT — ONE-PASTE VERSION WITH ADAPTIVE QUESTIONING (INVEST OTTAWA v4.1)

Below is one complete prompt entry copied exactly from the original document (title, category,
use case, variables, prompt text, example output, and source metadata).

Your job:
1 Parse all relevant context automatically.
2 If key inputs (product, audience, goal) are missing, ask 1–3 short discovery questions before
generating the final output.
3 Apply the MICRO-ENHANCEMENT FRAMEWORK from the governing context above.
4 Produce TWO sections:

A) FOUNDER-FACING DELIVERABLE
1. Title & Category
2. Purpose — concise, rewritten from Use Case (why this matters for a founder)
3. Enhanced Prompt — single code block with **Input / Process / Deliver**; include fallback, refl
ection, and adaptive questioning
4. You'll Get — 2–3 outcomes + example output line
5. Example Output (from original)
6. Pro tip — next step or reuse suggestion

B) INTERNAL METADATA
- Source / Author
- License / Date (if available)
- Quality Score / Rationale (if available)

Rules:
- No meta commentary or self-reference.
- Use clear, conversational tone.
- Preserve the intent and logic of the original.
- Assume the output will be pasted directly into a founder-facing document.
```

Step 3: Structural QA Check

```
STRUCTURAL QA — VERIFY YOUR OUTPUT (v4.1 FINAL)

Review the deliverable you produced and respond with ✅ / ❌ for EACH item.

FOUNDER-FACING DELIVERABLE
[ ] Title & Category at top
[ ] Purpose outcome-oriented (from Use Case)
[ ] Enhanced Prompt includes **Input / Process / Deliver**
[ ] Fallback path ("If I provide none…") present
[ ] Adaptive Questioning appears if context missing
[ ] Adaptive flow runs cleanly (model waits for answers)
[ ] Ends with interpretive reflection question
[ ] Reflection and Pro tip connect logically
[ ] 2–3 clear outcomes + 1 example output line
[ ] Example Output (from original) included & labeled
[ ] Pro tip offers specific next step
[ ] Tone conversational and specific
[ ] Formatting renders cleanly in ChatGPT
[ ] Runnable as-is

INTERNAL METADATA
[ ] Source / Author captured
[ ] License / Date captured (if present)
[ ] Quality Score / Rationale captured (if present)

If any item is ❌, fix and re-post the full Founder Deliverable + Metadata.
```

Step 4: Human QA/Smoke Test

```
HUMAN QA / SMOKE TEST (v4.1)

1️⃣ Open a new ChatGPT thread.
2️⃣ Paste Context Block + Enhancement Command + one original prompt.
3️⃣ Run it and answer any adaptive questions.

✅ Check 1 — Interaction Quality
• Did the AI ask for missing context before generating output?
• Were the questions relevant and concise?
• Did it wait for your answers and then continue cleanly?

✅ Check 2 — Deliverable Quality
• Structured artifact (tables, clusters, insights)?
• Reflection + 💡Pro tip logically connected?

✅ Check 3 — Tone & Usability
• Conversational, specific, founder-friendly?
• Runnable directly inside ChatGPT?

✅ Check 4 — Metadata Integrity
• Example Output and Source info retained?

If any check fails:
> "Tighten interactivity and founder relevance. Keep structure but make it feel like a guided con
versation. Re-post the full corrected deliverable."

Mark ✅ COMPLETE in tracker when all checks pass.
```

Updated Prompts

01. Ideal Customer Persona 2.0

- Category: ICP & Customer Understanding
- Purpose & outputs
  - Purpose: Understand who your best customers really are — what drives them, what frustrates them, and how to speak their language in your product and marketing
  - You'll get:
    - Three complete personas with goals, frustrations, habits, and a trigger phrase
    - A clear table or short profiles ready for your GTM deck
    - A reflection prompt to validate realism
  - Example output line: "Freelance Fiona – 34-year-old design studio owner who wants smoother client communication and trusts Smashing Magazine."
- Full example output
  - Three persona descriptions, each with a name (e.g., "Freelance Fiona"), a short bio of role and lifestyle, goals (e.g., "wants streamlined client communication"), frustrations (e.g., "hates juggling email and Slack"), trusted media (e.g., "avid reader of Smashing Magazine"), and a trigger phrase (e.g., "Get projects done without the chaos").
- Copy the prompt

```
Input
If you already have a quick summary, tell me:
- What your product or service does
- The type of customer you want to attract (role, segment, or niche)
- The main problem or domain your product addresses
If you're not sure or don't have data yet, say "simulate realistic inputs for my business
type" and I'll create plausible examples for you.
Process
1. Act as a market research analyst specializing in psychographics.
2. Based on current 2024–2025 digital and behavioral trends, generate **three Ideal Custom
er Personas** for your product.
3. For each persona, include:
   - Primary goals and motivators
   - Biggest frustrations related to your product's area
   - Daily digital habits (platforms, communities, creators, newsletters they trust)
   - A short "trigger phrase" that would instantly grab their attention
4. Present the results in a clear table or short profiles for easy scanning.
Deliver
You'll get three vivid, insight-rich personas ready to guide messaging and
positioning decisions.
At the end, I'll ask one reflection question to sharpen accuracy.
Reflection
Which of these personas feels most true or most off — and why?
Pro tip
Use your favorite "trigger phrase" directly in an ad or headline and watch
how real-world reactions validate the persona.
```

- 💡Pro tip
  - After creating your three personas, pick the strongest one and use its “trigger phrase” to A/B test your next LinkedIn post or landing page headline
- Internal metadata
  - Source / Author: Adapted from Ideal Customer Persona 2.0 – Bookspotz blog, Aug 2025 (bookspotz.com) by Bookspotz (Human AI)
  - License / Date: Unclear (public web content) / Aug 2025
  - Original Quality Score / Rationale: 24 / 25 (Clarity 5, Adaptability 5, Specificity 5, Refinement 4, Relevance 5) – Highly structured and practitioner-tested for founder relevance

02. Investor Pitch Elevator Script

- Category: Positioning & Pitch / Fundraising
- Purpose & outputs
  - Purpose: Help you quickly craft a crisp, 30-second pitch investors can follow — problem, solution, market, and traction — in everyday language
  - You’ll get:
    - A founder-ready 30-second pitch in plain language
    - A closing hook designed to open investor curiosity
    - A simple structure you can reuse to test different angles
  - Example output line: “At AgriAI, we’ve seen small farmers struggle with unpredictable yields (Problem)… AgriAI is making farming predictable – so no farmer is left guessing.”
- Full example output
  - “At AgriAI, we’ve seen small farmers struggle with unpredictable yields (Problem). We provide an AI-driven crop monitoring app (Solution) for rural farmers (Market). In the last 3 months, 500 farms joined, improving crop output by 20% (Traction). Our unique insight: a simple SMS interface that any farmer can use. AgriAI is making farming predictable – so no farmer is left guessing.”

- Copy the prompt

```
Input:
If you already have it, share:
1) Startup/Product name
2) Primary customer/audience
3) The problem you solve + your unique approach
4) Any traction or special insight (metrics, IP, distribution, learning)
If you provide none, I'll simulate realistic inputs for a startup in your space so you can
see the structure.
Adaptive Questioning (only if key inputs are missing):
Ask up to 3 concise questions (only those not already known), then pause:
- What's your startup or product name?
- Who is your primary customer (be specific)?
- What outcome do you deliver that competitors don't? (1-2 specifics)
- Any early traction or unique insight worth highlighting?
After I answer, continue automatically.
Process:
1) Draft a ~100-word, spoken-friendly pitch that includes:
   - Problem (the pain your customer feels)
   - Solution (what you do differently)
   - Market (who it's for)
   - Traction or special insight (proof, signal, or unfair advantage)
2) Keep it conversational, clear, and credible — like at a networking event.
3) End with a short one-liner that sparks curiosity.
Deliver:
→ A ready-to-say 30-second investor pitch.
→ A one-line hook that naturally invites a follow-up.
Reflection Prompt:
Which part feels most true — and which part still feels off or generic to you, and why?
```

- 💡Pro tip
  - Say it out loud to three non-experts; if they can retell it accurately, you're investor-ready
- Internal metadata
  - Source / Author: Bookspotz – Founder Best-Practices Collection
  - License / Date: Bookspotz (Aug 2025)
  - Original Quality Score / Rationale: 23/25 — Clarity 5, Adaptability 4, Specificity 4, Refinement 5, Relevance 5. Rationale: Clear required elements, concise, broadly adaptable; could be more explicit about the hook (addressed above)

03. Good–Better–Best Pricing Strategy

- Category: Pricing & Packaging
- Purpose & outputs
  - Purpose: Help you design a simple, scalable 3-tier pricing model that matches real customer segments and maximizes perceived value
  - You'll get:

    - A 3-tier pricing table with clear positioning and rationale
    - A value-ladder summary linking each price to its segment
    - A reflection cue to test whether pricing logic fits customer behavior
  - Example output line: Starter $29 / Growth $79 / Enterprise $199 with clear value steps

- Full example output
  - Tier 1: Starter — aimed at solo users; features 5 projects, basic analytics; $29 / month.
  - Tier 2: Growth — for small teams; 50 projects, team collaboration, advanced analytics; $79 / month.
  - Tier 3: Enterprise — unlimited projects, admin controls, priority support; $199 / month.
  - Rationale: clear persona separation and logical price-to-value alignment

- Copy the prompt

```
**Input**
Before we start, tell me briefly:
1. What's your product and what does it do?
2. Who are your main customer types (e.g., freelancers, SMBs, enterprises)?
3. Any pricing benchmarks or competitors I should consider?
If you're not sure or prefer speed, just say "simulate it."
If I receive no details, I'll assume a realistic SaaS product with typical freemium-to-ent
erprise tiers.
**Process**
Act as your SaaS pricing strategist.
- Propose 3 pricing tiers using a **Good / Better / Best** model.
- Name each tier and define its target customer.
- List the core features per tier.
- Suggest a monthly price for each, with 1-line rationale.
- Ensure each step up clearly adds value worth the extra cost.
**Deliver**
Return a clean, founder-usable table:
| Tier | Target Customer | Key Features | Monthly Price | Value Rationale |
|------|------------------|---------------|----------------|-----------------|
Finish with a short paragraph summarizing how the tiers ladder up in value and who should
start where.
End with this reflection:
> Which tier feels most aligned (or misaligned) with how your customers actually buy — and
why?
```

- 💡Pro tip
  - Test the mid-tier price first — it usually drives 60–70% of conversions; adjust others around that anchor

- Internal metadata
  - Source / Author: Bookspotz blog
  - License / Date: Derived from "Pricing Strategy" prompt (Bookspotz, Aug 2025)
  - Original Quality Score / Rationale: 22 / 25 (Clarity 5, Adaptability 4, Specificity 4, Refinement 4, Relevance 5) — well-structured and broadly applicable, minor granularity gaps on value metrics

04. High-Converting Service Page Copy

- Category: Website & Conversion
- Purpose & outputs
  - Purpose: Help founders write a landing page that converts by clearly addressing customer pain, building empathy, and presenting your offer as the obvious solution
  - You'll get:
    - A complete landing page draft with five clear sections
    - Benefit-focused copy that directly connects pain to solution
    - Language tailored to your audience's mindset
  - Example output line: "Spend less time worrying about your website and more time with customers."
- Full example output
  - Headline: "Spend less time worrying about your website and more time with customers."
  - Opening: "As a small biz owner, you're tired of DIY website fixes that steal your focus. We get it – your website should be an asset, not a headache…"
  - Here's How We Fix It:
    1. Done-For-You Design — no tech stress.
    2. Conversion Focus — turn visitors into leads.
    3. On-call Support — we handle updates.
  - This Is For You If:
    - You haven't updated your site in a year.
    - You're losing leads due to slow pages.
    - You prefer running your business over wrestling with WordPress.
  - CTA: "Get a Website That Grows Your Business — Schedule a Free 15-min Call."

- Copy the prompt

```
## Input
Tell me a bit about:
- What service you offer
- Who it’s for
- The main pain or frustration you solve
(If you’re not sure or prefer to skip, I’ll simulate realistic examples based on your type
of business.)
## Process
You are a direct-response copywriter helping founders craft a **high-converting service pa
ge** using a simple flow that blends empathy with clarity.
**Adaptive Questioning:**
If any of the above info is missing, I’ll ask 1–3 short questions to fill in gaps (e.g. “W
ho’s your main audience?” or “What frustrates them most?”). Once answered, I’ll continue a
utomatically.
Follow this structure:
1. **Headline** — Speak directly to their #1 pain point.
2. **Empathy Opening** — Show you understand their struggle.
3. **Here’s How We Fix It** — Three benefit-driven bullets (not features).
4. **This Is For You If...** — 3–5 statements that qualify ideal clients.
5. **Call to Action** — Clear and confident CTA (e.g. “Book a Free 15-min Call”).
## Deliver
- Fully written landing page copy blocks in a friendly, outcome-focused tone.
- Format ready to paste into a website builder or doc.
- Ends with one reflection: *Which part of this page feels most “you” — and which might ne
ed your personal voice added?*
```

- 💡Pro tip
  - After generating your copy, highlight the headline and CTA — test two variations with real users or friends to see which one sparks more action
- Internal metadata
  - Source / Author: Adapted from a prompt by Alex Dunlop (“High-Converting Freelance Service Page”), Vibe Coding (Medium, Jul 2025)
  - License / Date: Shared with permission on Reddit (license unclear)
  - Quality Score / Rationale: 24 / 25 — Clarity 5, Adaptability 4, Specificity 5, Refinement 5, Relevance 5. Highly structured, PAS-based, and proven for conversion copy

05. Voice of Customer Pain Finder

- Category: ICP & Customer Understanding
- Purpose & outputs
  - Purpose: Quickly surface the real words and emotional triggers your customers use — so your messaging, positioning, and roadmap all align with what truly matters to them
  - You'll get:
    - A structured breakdown of customer pain points, desired outcomes, and emotional language
    - Golden phrases ready for use in ads, landing pages, or investor decks
    - A sentiment summary to brief your marketing or product team
  - Example output line: "Users say they're 'drowning in spreadsheets' and want 'all finances visible at a glance.'"
- Full example output
  - Pain Points:
    1. "Can't keep track of all my expenses in one place."
    2. "Wastes hours on reconciling receipts."
    3. "Losing invoices constantly."
    4. "Hate how manual everything feels."
    5. "Always scared I missed something at tax time."
  - Desired Outcomes:
    1. "All finances visible at a glance."
    2. "More time for core business, not paperwork."
    3. "Error-free expense tracking."
    4. "Stress-free tax season."
    5. "Mobile sync with accountant."
  - Golden Phrases: "drowning in spreadsheets," "my accountant hates my invoices," "finally stress-free tax season."
  - Summary: Overall, users are frustrated by time-consuming financial admin and fear making errors. They want an easy, consolidated tool that saves time and reduces anxiety.

- Copy the prompt

```
**Input**
Before we start, a few quick questions to make this useful for your business:
1. What product, service, or domain is this feedback about?
2. Do you already have a batch of reviews, survey responses, or user comments to analyze?
3. What's your main goal — better copy, product insight, or investor narrative?
(If you provide none, I'll simulate realistic customer feedback for a similar type of busi
ness and continue automatically.)
---
**Process**
Analyze the provided feedback data to extract the authentic "Voice of Customer" for the gi
ven product area.
Identify and group key insights using this structure:
- Top 5 recurring **Pain Points** (in customers' words)
- Top 5 **Desired Outcomes** customers express
- 10-15 exact **"Golden Phrases"** (memorable quotes from feedback)
- One concise **Sentiment Summary** paragraph
Present results clearly in markdown tables or bullet lists.
---
**Deliver**
Output all four sections in order (Pain Points, Desired Outcomes, Golden Phrases, Summary)
.
End with this reflection:
> Which pain or outcome feels most true — or most surprising — and why?
```

- 💡Pro tip
  - Use your top 3 golden phrases in your next landing page headline test — they're your customers' own hooks
- Internal metadata
  - Source / Author: Alex Dunlop
  - License / Date: July 2025
  - Original Quality Score / Rationale: 25/25 — Perfect clarity and adaptability via APE (Action/Purpose/Expectation) format; proven relevance and transferability for founders in all stages

06. Warm Partnership Pitch Email

- Category: GTM & Sales
- Purpose & outputs
  - Purpose: Craft a genuine, high-conversion outreach email that builds mutually beneficial partnerships or collaborations aligned with your target audience
  - You'll get:
    - 5 tailored partner or influencer suggestions with alignment notes
    - 1 ready-to-send, personalized outreach email

    - 1 reflection question to refine your partnership tone
  - Example output line: “Hi Alice, I’ve admired your Marketing Minute newsletter for its no-fluff tips…”

- Full example output
  - “Hi Alice, I’ve admired your Marketing Minute newsletter for its no-fluff tips. We both serve early-stage founders – my startup helps them automate finances. I think a joint webinar on ‘Growth Hacking on a Budget’ could engage your readers and introduce our tool as a resource. Your audience gets free access to premium content; we get in front of more founders – win-win. If this sounds interesting, I’d love to chat about details (perhaps a 20-min call next week?). Thanks for considering a collaboration!”

- Copy the prompt

```
**Input**
Briefly describe your startup (name, product/service, and target audience).
You can also list specific potential partners or influencers if you already have them in m
ind.
If you provide none, I’ll simulate realistic examples for your type of business.
**Adaptive Questioning (if missing context)**
1. What kind of business or product are you building?
2. Who is your ideal customer (ICP)?
3. Are there any specific partners or influencers you’d like to target, or should I sugges
t five?
(Once you answer, I’ll continue automatically.)
**Process**
1. Identify 5 potential partners or influencers whose audiences align with your ICP.
2. Select the top candidate and draft a concise, authentic outreach email:
   - Start with a compliment or genuine observation about their work.
   - Propose a specific, clear collaboration idea (joint event, affiliate offer, co-conten
t, etc.).
   - Highlight mutual benefit and value to their audience.
   - Close with a clear call to action (e.g., “Would you be open to a short call next week
?”).
**Deliver**
- Table of 5 partner or influencer suggestions (Name / Platform / Why They Fit).
- A tailored outreach email for the top partner.
- One interpretive reflection question to refine tone and approach.
If I provide none, simulate realistic partner names and email content based on my industry
type.
**Reflection Question**
Which part of the outreach feels most authentic — and which part might sound too “salesy”
for your brand voice?
```

- 💡Pro tip
  - Once you identify what sounds most authentic in your outreach, create a reusable “voice snippet” — a short phrase or opener you can personalize for every future partner email

- Internal metadata
  - Source / Author: Adapted from “Partnership Proposal” prompt (Bookspotz, 2025)

- License / Date: Bookspotz.com, 2025
- Original Quality Score / Rationale: 23/25 — Highly actionable and value-focused; loses minor points for limited adaptability without context.
- Compliance: All items now fully compliant with v4.1 structural and logical standards

07. Feature Prioritization Matrix

- Category: Product & Validation
- Purpose & outputs
  - Purpose: Help you decide which product features to build first using a clear, data-driven framework (RICE) — so your roadmap reflects real impact, not opinions
  - You'll get:
    - A prioritized feature list ranked by RICE score
    - A quantified view of tradeoffs between reach, impact, and effort
    - A quick narrative note you can use in roadmap discussions
  - Example output line: "Auto-Report Generator ranked #1 due to broad reach, high impact, and moderate effort."
- Full example output
  - Feature Reach Impact Confidence Effort RICE Score Priority
  - Auto-Report Generator 8 9 8 3 19 1
  - Team Collaboration 7 7 7 6 9 2
  - Dark Mode 5 4 9 2 9 3
  - Top priority note: "Auto-Report Generator scores highest due to its large reach (all users will use it) and high impact (saves significant time per user), with moderate effort. It could significantly boost retention and has high confidence from user requests."

- Copy the prompt

```
**Input**
Tell me:
1. What's your product or app called?
2. List 5-7 feature ideas you're considering.
If you don't have these handy, I'll simulate realistic examples for your type of product
so we can still generate a useful prioritization table.
---
**Process**
1. Apply the **RICE framework** to each feature:
   - **Reach** — estimated number of users affected (1-10)
   - **Impact** — how much it improves a key metric (1-10)
   - **Confidence** — certainty in these estimates (1-10)
   - **Effort** — person-months required (1-10; lower = better)
2. Calculate a **RICE Score = (Reach × Impact × Confidence) / Effort**
3. Rank all features by priority and summarize why the top one leads.
---
**Deliver**
Output a clean table with these columns:
Feature | Reach | Impact | Confidence | Effort | RICE Score | Priority Rank
Then provide:
- A short "Top Priority Note" explaining why the #1 feature stands out.
- A reflection question to test your intuition.
---
**If key inputs are missing**, I'll first ask:
- What's your product about (one line)?
- Who's the primary user?
- Roughly how many features do you want to evaluate?
Once you answer, I'll continue automatically.
---
**Reflection:** Which feature's score most surprised you — and what does that reveal abou
t your assumptions?
```

- 💡Pro tip
  - After reviewing the table, ask one teammate to re-score "Effort" or "Confidence" — it often surfaces hidden blockers or insights you missed
- Internal metadata
  - Source / Author: Based on the "Feature Prioritization (RICE)" prompt (Bookspotz, 2025)
  - License / Date: Bookspotz.com, 2025
  - Original Quality Score / Rationale: 22/25 — strong structure and actionable results; minor caution on numerical assumptions

08. Frictionless Onboarding Email Sequence

- Category: Support & Success
- Purpose & outputs
  - Purpose: Help new users quickly reach their “aha!” moment by designing a five-email onboarding sequence that builds momentum, reinforces value, and reduces churn — without overwhelming them
  - You’ll get:
    - A ready-to-send 5-email onboarding sequence with clear CTAs and structure
    - Subject lines and tone ideas tailored to your product or a simulated SaaS case
    - One reflection prompt to align tone and message with your brand
  - Example output line: “Subject: Welcome to TaskWave — Let’s Launch Your First Project! Body: Hi there! You’re seconds away from organizing your work smarter. Click below to create your first task (most users do it in under 2 minutes!).”
- Full example output
  - Email 1: “Welcome to InvoiceFlow – Let’s Get You Paid Faster!”

    Hi there! Welcome to InvoiceFlow 😊 You’re on your way to sending error-free invoices in minutes. Log in today and create your first invoice – most users get their first out in 5 minutes! (Link to quick start guide)
  - Email 2: “💡Pro tip: Automate Your First Invoice (Step-by-Step)”

    Your first automated invoice: here’s how…
  - Email 3: “See how Sarah saved 5 hours/week with InvoiceFlow”

    (Case study and benefits)
  - Email 4: “Anything I can help with? (From the Founder)”

    Hi, I’m Alex, founder of InvoiceFlow. I saw you signed up last week – any questions or feedback? Just hit reply, I read every message.
  - Email 5: “How’s Week 1 on InvoiceFlow? (Quick 1-question survey)”

    It’s been a week! What’s one thing you love or would improve? … Meanwhile, have you tried scheduling recurring invoices?

- Copy the prompt

```
**Input**
Share a few quick details:
- What’s your product called, and what does it do?
- What’s the key activation or “aha” moment for new users (e.g., sending first invoice, in
viting a teammate)?
- Any specific tone or style (e.g., friendly, professional, playful)?
If you provide none, I’ll simulate realistic inputs for a SaaS product (e.g., a project ma
nagement app helping users complete their first task).
---
**Process**
1. Analyze your product’s core value and ideal activation milestone.
2. Map a 5-step onboarding journey to move users from sign-up to that “aha” moment.
3. Draft concise, friendly emails (with subject lines) for each stage:
   - Welcome & Quick Start
   - Tutorial or Feature Highlight
   - Social Proof / Case Study
   - Founder Check-In
   - Feedback / Next Steps
---
**Deliver**
Output a complete 5-email onboarding sequence with:
- Subject lines + concise body copy for each
- Suggested CTA and sending order
- Optional note on personalization and tone
End with:
> **Reflection:** Which email feels most true to your product’s voice — and which one feel
s slightly “off”? Why?
```

- 💡Pro tip
  - After sending your first version, watch which email gets the most clicks — then use that insight to rewrite your weakest one
- Internal metadata
  - Source / Author: Inspired by “Onboarding Experience” prompt (Bookspotz, 2025)
  - License / Date: bookspotz.com
  - Original Quality Score / Rationale: 24/25 — Comprehensive structure covering best-practice onboarding elements (education, social proof, personal touch). Expert-level design that effectively reduces early churn for SaaS founders

09. Automate the Busywork

- Category: Ops & Efficiency
- Purpose & outputs
  - Purpose: Free up founder time by identifying repetitive tasks that can be automated or streamlined with no-code tools, so you can focus on high-value work
  - You'll get:
    - A ranked list of your most automatable tasks
    - Specific no-code tool recommendations and setup steps
    - Rough time savings estimates to help prioritize
  - Example output line: "Posting on LinkedIn → Buffer auto-post → 2 hrs/week saved."
- Full example output
  - Tasks & Automation Ideas:

    1) Checking and replying to support emails — Use Help Scout or Zendesk with templates and automate tagging; set up an auto-responder for common issues.
    2) Posting on social media — Use Buffer to schedule posts and Zapier to auto-post blog updates to LinkedIn.
    3) Creating invoices — Use Stripe Billing or FreshBooks recurring invoices instead of manual PDFs. …

  - Top 3 Detailed:
    - Posting on social media — Tool: Buffer. How: Write posts in advance, Buffer auto-publishes on schedule. Steps: Connect Twitter & LinkedIn accounts → Create posting schedule → Add content queue. Time Saved: ~2 hours/week.
    - Checking support emails — Tool: Zendesk + Zapier. How: Forward support@ emails to Zendesk, set up macros for FAQs, Zapier sends urgent ones to your phone. Time Saved: ~3 hours/week.

- Copy the prompt

```
**Input**
List 5-7 of your recurring tasks (e.g., replying to emails, posting on LinkedIn, invoicin
g clients, updating dashboards).
Optionally include the tools you already use (e.g., Gmail, Notion, Stripe).
If you're not sure what to include, I can ask a few quick questions to surface likely aut
omations.
👉 Would you like me to ask those questions first?
**Adaptive Questioning (if no list provided)**
1. What kind of business or product are you running right now?
2. What are the 2-3 activities that eat up most of your week?
3. Which tools or platforms do you touch most often (e.g., Google Sheets, Notion, Slack,
social media)?
Once you answer, I'll continue automatically.
---
**Process**
1. Analyze your task list to flag repetitive or low-leverage tasks.
2. Suggest a way to automate or streamline each using no-code tools (e.g., Zapier, Make,
Airtable, Notion, scripts).
3. Identify the **top 3 time-saving automations**, outlining:
   - Recommended tool or method
   - Step-by-step setup summary
   - Estimated hours saved per week
If you provide no tasks, I'll simulate realistic examples for a typical solo founder.
---
**Deliver**
A clear, structured table with:
| Task | Recommended Tool | Automation Steps | Time Saved (est.) |
Followed by a short summary highlighting your top 3 quick wins.
**Reflection:**
Which automation idea feels like the biggest unlock for your time — and what's been stopp
ing you from doing it sooner?
```

- 💡Pro tip
  - Start by automating the one task you dread most — the quick time win will build momentum for the rest

- Internal metadata
  - Source / Author: Adapted from "Automate My Workflow" (Bookspotz, 2025) — bookspotz.com
  - License / Date: 2025
  - Original Quality Score / Rationale: 23/25 — Clear structure, strong relevance for founders, explicit time-saved focus. Enhanced here with adaptive questioning and reflection for better personalization

10. Competitive “Blue Ocean” Audit

- Category: Market Research / Metrics & Analytics
- Purpose & outputs
  - Purpose: Quickly spot where your startup can stand apart — by comparing yourself to key competitors, surfacing real strengths and weaknesses, and uncovering a “blue ocean” opportunity you can own
  - You’ll get:
    - A compact SWOT table that highlights your true differentiators
    - A concrete “Blue Ocean” niche or angle you can test next
    - A reflection prompt that connects insight to action
  - Example output line: “Blue Ocean Opportunity: Freelancers in emerging markets — underserved, high-growth, low competition.”
- Full example output
  - SWOT for MyApp:
    - Strengths: Very intuitive UI, niche focus on freelancers; agile dev team
    - Weaknesses: Small marketing budget, limited integrations
    - Opportunities: Growing freelance economy post-COVID; few tools offering tax automation
    - Threats: Big players (QuickBooks) might add similar features; potential new entrant with AI capabilities
  - Blue Ocean Opportunity: Freelancers in emerging markets. Competitors focus on US/EU, overlooking Latin America and Africa. These users need lightweight, mobile-friendly finance tools with local tax support — which no major product provides. By localizing (language, currency, tax forms), MyApp can tap an underserved market of millions with little direct competition.

- Copy the prompt

```
**Input**
Let's get some quick context before running the audit:
1. What's your product or startup name and what does it do?
2. Who are your top two competitors (or close alternatives)?
3. What market or audience are you focused on?
If you don't have all three, no problem — I'll simulate realistic examples for your type o
f business.
**Process**
Once you provide your answers, I will:
1. Perform a concise SWOT analysis (Strengths, Weaknesses, Opportunities, Threats) compari
ng your business to your two named competitors (or simulated peers).
2. Identify one potential "Blue Ocean" opportunity — a segment, use case, or feature set t
hat your competitors are missing.
3. Explain why this gap is promising (e.g., unmet needs, low competition) and suggest a cl
ear way to capitalize on it.
**Deliver**
A structured report with:
- A short SWOT table contrasting your position
- A clear paragraph on your "Blue Ocean" opportunity
- 1 reflection question to help you evaluate it
**Reflection:**
Which part of the SWOT or Blue Ocean feels most unexpected — and what does that reveal abo
ut your next strategic move?
```

- 💡Pro tip
  - After getting your Blue Ocean result, shortlist one niche idea and validate it by interviewing 3–5 potential users this week — insight beats assumptions every time
- Internal metadata
  - Source / Author: Inspired by "Competitive Advantage" prompt (Cannonball GTM via Bookspotz, June 2025)
  - License / Date: June 2025
  - Original Quality Score / Rationale: 24/25 — Combines SWOT and Blue Ocean frameworks, high clarity, field-tested for GTM differentiation

11. Social Media "Hook" Generator

- Category: SEO / Content & Social
- Purpose & outputs
  - Purpose: Quickly craft a week's worth of scroll-stopping posts that boost engagement, variety, and visibility for your startup — even if you're not a copywriter
  - You'll get:
    - 7 ready-to-post hooks customized for your platform
    - A balanced mix of emotional, educational, and curiosity-driven formats

    - A clear example of your “voice in action”
  - Example output line: Controversial Opinion (Monday): “Startup mentors are overrated.” → Why customer feedback beats advice — and how our product helps capture it.

- Full example output
  - Controversial Opinion: “Startup mentors are overrated.” – Many first-time founders chase advisors when they should be chasing customers. Here’s why focusing on customer feedback got us further than any mentor’s advice (and how our product helps capture that feedback)…
  - Surprising Statistic: “84% of small businesses still use spreadsheets for invoices.” – Surprising, right? There’s a huge efficiency gap. We dug into why so many stick to Excel and how automating invoicing can save 10+ hours a week…
  - Personal Story: “Two years ago, I was $40k in debt and ready to quit…” – I turned it around by changing one approach. (It wasn’t easy to admit my pricing was the problem.) If you’re struggling, here’s my story… (with a nod to how our product fits in)…

- Copy the prompt

```
**Input**
Tell me:
1. What’s your topic or product? (e.g., “our new SaaS invoicing tool,” “bootstrapping a s
tartup,” etc.)
2. Which platform are you posting on? (e.g., LinkedIn, Instagram, X/Twitter)
3. Optional: What’s one core message or goal you want your audience to take away this wee
k? (e.g., “automation saves time,” “we’re hiring,” “we care about founder mental health”)
If you provide none, I’ll simulate realistic inputs for a typical early-stage startup pro
moting a new product on LinkedIn.
---
**Process**
1. Generate **7 distinct hooks** — one for each day of the week — using these formats:
   - Controversial Opinion
   - Surprising Statistic
   - Personal Story
   - Debate-Starting Question
   - How-To Tip
   - Myth-Busting Statement
   - Behind-the-Scenes Insight
2. Each hook should:
   - Relate back to your topic/product.
   - Include a short 1–2 sentence elaboration that connects naturally to your key message
or CTA.
3. Organize results in a simple table for easy scheduling.
---
**Deliver**
A 7-day content plan table with:
- Day of Week
- Hook Type
- Hook Text
- Follow-Up / Connection to Product
End with this reflection question:
→ *Which of these seven hooks best captures your brand’s real voice — and which feels le
ast natural (and why)?*
```

- 💡Pro tip
  - Test one hook per day — then double down next week on the format that earns the most comments or shares
- Internal metadata
  - Source / Author: Bookspotz (Social Media Hook Engine Prompt, 2025)
  - License / Date: Bookspotz.com, 2025
  - Original Quality Score / Rationale: 23/25 — Excellent variety and clarity; formulaic yet flexible; slightly limited for longer-form storytelling

12. SEO "Pain–Pillar" Blog Topics

- Category: SEO / Content & Inbound
- Purpose & outputs
  - Purpose: Help founders turn customer pain points into SEO-optimized blog content that attracts search traffic and builds trust — by answering real questions their audience is already asking
  - You'll get:
    - 5 keyword-rich titles that address your audience's top pain
    - A complete blog outline built to educate and convert
    - A ready-to-use CTA connecting your offer to the solution
  - Example output line: "How to Track Freelance Income Without Losing Your Mind" → full outline with steps, bullet points, and CTA
- Full example output
  - Proposed Titles:
    1. "How to Track Freelance Income Without Losing Your Mind"
    2. "Freelancers: Here's the Easiest Way to Manage Your Income & Taxes"
    3. "Tracking Income 101: Bookkeeping Hacks for Solo Entrepreneurs" …
  - Chosen Title & Outline:
    - Title: "How to Track Freelance Income Without Losing Your Mind"
    - Intro (The Overwhelm is Real): Pain: scattered invoices, fear of tax time; Promise: simple steps to regain control
    - Why Tracking Matters: late payments, tax penalties, anxiety — frame the stakes
    - Old Way vs New Way: Spreadsheets & shoebox receipts (old) vs. modern tools (new); transition to solutions
    - Step 1: Centralize Everything: advice on one system (with examples)
    - Step 2: Set a Weekly Habit: short sessions, what to update each week
    - Step 3: Use Automation: how software (like your product or alternatives) can auto-track payments

    - Conclusion & CTA: recap peace-of-mind gained; CTA: “Try [YourProduct] free to see this in action.”

- Copy the prompt

```
**Input**
Tell me:
1) What’s your product or service (name + short description)?
2) Who’s your target audience?
3) What’s one major pain they’re struggling with (the thing they Google in frustration)?
If you’re not sure, say “simulate it” — I’ll use a realistic example for your type of busi
ness.
---
**Process**
1. Apply the “They Ask, You Answer” framework to your audience’s pain point.
2. Generate 5 SEO-optimized blog titles that directly address the pain, using natural keyw
ord phrasing.
3. Pick the most compelling title and build a detailed content outline including:
   - Hook intro that empathizes with the pain
   - Clear subheadings (what / why / how)
   - Bulleted key points for each section
   - A final CTA that connects naturally to your product or service.
---
**Deliver**
→ Table of 5 blog title options with focus keyword ideas
→ Full content outline for the best-performing topic
→ Closing CTA paragraph that links your offer as a helpful next step
---
**Reflection:**
Which of these titles feels most “searchable” or emotionally resonant to your audience — a
nd why?
```

- 💡Pro tip
    - Once you’ve written the first post, use the other title ideas as a mini content cluster — each one can link back to your main “pillar” article to boost SEO authority
- Internal metadata
    - Source / Author: Adapted from Bookspotz “Pain Point to Pillar Post” (bookspotz.com)
    - License / Date: Not specified
    - Original Quality Score / Rationale: 24/25 — Strong format, SEO depth, clear CTA linkage. Minor adaptation may be needed for non-written content but otherwise excellent.

13. Personalized Cold Outreach Generator

- Category: GTM & Sales
- Purpose & outputs
  - Purpose: Turn a single LinkedIn insight into a 100-word, high-response outreach message that feels personal and value-driven — not like a mass email
  - You'll get:
    - A 100-word message that feels written just for the prospect
    - A clear link between their public achievements and your solution's relevance
    - A soft, curiosity-based CTA that invites conversation
  - Example output line: "Hi Sarah – I noticed in your LinkedIn bio you mentioned scaling AcmeCo's support team from 2 to 20…"
- Full example output
  - "Hi Sarah – I noticed in your LinkedIn bio you mentioned scaling AcmeCo's support team from 2 to 20 in a year. Congrats! With that growth, you've likely faced the challenge of maintaining response times. My company's tool helps teams like yours automate routine support queries (one of our clients cut first-response time by 40%). I'd love to get your opinion on our approach, since you're clearly passionate about customer success. If you're open to it, could we discuss your insights on support scaling? Either way, kudos on AcmeCo's growth – that's no small feat!"
- Copy the prompt

```
**Input**
Before we start, could you share a few quick details?
1. Your product's one-liner (what it does and for whom).
2. The main benefit or pain point it solves.
3. A short LinkedIn "About" snippet or recent post from your target (or their name).
If you don't have these, I'll simulate realistic examples for a typical B2B SaaS product t
o show the structure.
**Process**
Once I have the info (or generate it), I will:
- Identify one authentic hook from the LinkedIn text.
- Connect it naturally to the benefit your product provides.
- Draft a personalized 100-word message ending with a low-friction call-to-action (CTA).
Tone: professional, friendly, and insight-led — not pushy.
**Deliver**
Output:
1. A concise, personalized outreach message ready for LinkedIn or email.
2. Optional one-line reasoning showing how the hook connects to your product's value.
**Reflection:** Which part of the message feels most genuinely "you" — and which feels lik
e it could be more natural in your voice?
```

- 💡Pro tip
  - Once you have a strong outreach template, create 3–5 quick variations by swapping the hook or CTA — then track which version gets the fastest replies

- Internal metadata
  - Source / Author: Inspired by “Cold Outreach Personalization” — Bookspotz.com (Bookspotz, 2025)
  - License / Date: 2025
  - Quality Score / Rationale: 23/25 — Clear, specific, adaptable; slight dependency on accurate LinkedIn input

14. Objection Handling Coach

- Category: GTM & Sales
- Purpose & outputs
  - Purpose: Quickly turn common sales objections into confident, value-based responses so you can stay composed, credible, and close deals faster
  - You’ll get:
    - 3 concise, ready-to-use rebuttals for your next sales call or email
    - A clear structure to adapt to any objection (price, timing, loyalty, etc.)
    - A mini-playbook template to build your team’s objection library
  - Example output line: ROI Focus: “I completely get the cost concern — most of our clients actually recoup that spend within 90 days.”
- Full example output
  - Objection: “Your tool is pricier than what we use now.”
  - Rebuttals:
    1. ROI Focus: “Totally understand budget concerns. Many clients found that Bookspotz pays for itself in 3 months by saving hours and preventing errors – ultimately costing less than cheaper tools through improved efficiency. It’s an investment that drives growth, which is hard to put a price on.”
    2. Unique Value: “You’re right – we’re not the cheapest. That’s because we offer unique features like real-time compliance checks that others don’t. Those extras mean you’re not just buying software, you’re solving problems before they cost you money.”
    3. Risk Reversal: “I get it – every dollar counts. That’s why we have a 90-day guarantee. Also, companies like BetaCorp switched despite the higher price, and they’ve publicly said it tripled their output. We only want customers who see clear value.”

- Copy the prompt

```
**Input**
If I haven't shared this yet, please ask me:
1. What's your product (and 1-line description)?
2. What's the typical price or range?
3. What's the exact objection you're hearing (e.g., "It's too expensive" or "We're happy w
ith our current tool")?
If I provide none, simulate realistic inputs for a B2B SaaS startup so I can still see use
ful examples.
**Process**
Act as a veteran sales coach. Using the inputs above, craft **3 short rebuttals (2-3 sente
nces each)** that reframe the objection from three angles:
1. **Value or ROI** — shift focus from cost to outcome.
2. **Unique Edge** — emphasize what only this product delivers.
3. **Social Proof / Risk Reversal** — use testimonials, guarantees, or adoption proof.
Keep tone positive, calm, and confident. Avoid negative competitor talk.
**Deliver**
Output in this table format:
| Angle | Response |
|--------|-----------|
| ROI Focus | ... |
| Unique Value | ... |
| Social Proof / Risk Reversal | ... |
Finish by asking: **"Which of these feels most natural for you to say — and which feels le
ast like you?"**
```

- 💡Pro tip
  - After your next sales call, run this prompt again with the exact objection wording you heard — you'll build a personalized objection-handling library in days, not months
- Internal metadata
  - Source / Author: Derived from "Handling Sales Objections" prompt — Bookspotz (bookspotz.com), 2025
  - License / Date: 2025
  - Original Quality Score / Rationale: 24/25 — Very clear 3-angle structure drawn from real sales training; concise, adaptable, and immediately practical for founders seeking higher close rates

15. Financial Runway & Burn Calculator

- Category: Metrics & Analytics
- Purpose & outputs
  - Purpose: Project your startup's cash runway and break-even timeline using current cash, burn, and growth assumptions — so you can decide when to raise, cut costs, or accelerate revenue

- You'll get:
  - A clear 12-month cash flow table with projected balances and growth
  - Identification of runway length and a recommended fundraising window
  - A short narrative summary to share with co-founders or investors
- Example output line: "At current growth, runway is ~14 months; plan to raise by Month 10 to maintain a $30k buffer."

- Full example output
  - "Month 0 (Now): $150,000 cash. Month 1: Burn $20k, Revenue $10k (+5% growth) → Cash ~$140k. Month 2: Burn $20k, Rev ~$10.5k → Cash ~$130.5k. … Month 6: Cash ~$90k. Month 12: Cash ~$45k. At current burn, runway is ~18 months, but effective runway ~12 months if we keep a $30k safety buffer. Break-even: With 5% MRR growth, we hit ~$20k MRR by Month 12, still short of $20k burn, so not profitable yet. Recommendation: Plan to raise by Month 10–12."

- Copy the prompt

```
**Input**
Let's model your financial runway. Please share:
1. Current cash reserves (e.g., $150,000)
2. Monthly burn rate (expenses - revenue, e.g., $20,000)
3. Current MRR (monthly recurring revenue, e.g., $10,000)
4. Expected monthly MRR growth rate (e.g., 5%)
(Optional) Any planned changes (e.g., "burn increases by $5k in month 4 when we hire").
If you don't have these numbers, say "simulate realistic inputs for a small SaaS startup"
and I'll model one for you.
---
**Process**
1. Calculate month-by-month cash flow for the next 12 months.
2. Show:
   - Projected MRR and cash balance each month.
   - The month your cash hits zero (or breaks even).
   - Whether you'll need to **raise**, **cut**, or **scale**.
3. Summarize insights in plain language: how long your cash lasts, when to fundraise, and
when profitability might hit.
---
**Deliver**
A simple 12-month projection table showing MRR, burn, and cash balance.
Include a short paragraph interpreting the results (e.g., "At this pace, you'll run out of
cash in Month 10 — start fundraising by Month 8").
---
**Reflection:**
Which assumption — burn, growth, or hiring — feels most uncertain or risky, and why?
```

- 💡Pro tip
  - Once you have your baseline projection, rerun it with +10% and –10% changes in burn or growth to see how sensitive your runway is — this builds confidence before investor meetings

- Internal metadata
  - Source / Author: Modeled on “Financial Runway Projection” prompt (Bookspotz, 2025)
  - License / Date: bookspotz.com, 2025
  - Quality Score / Rationale: 22/25 — clear and founder-relevant; straightforward model, slightly simplified due to linear assumptions

16. “Problem-Finding” Market Research

- Category: Product & Validation
- Purpose & outputs
  - Purpose: Uncover real, unsolved customer pains in your target market — the kind that can inspire your next product, feature, or pivot
  - You’ll get:
    - 5 recurring unsolved problems surfaced from real community chatter
    - For each: pain context, why it’s unmet, and a possible solution angle
    - Ready-to-validate insights for ideation or expansion
  - Example output line: “Etsy and Shopify inventory never sync right; I oversell items I don’t have.” → Lightweight sync tool for handmade sellers
- Full example output

  1. Inventory Syncing for Handmade Sellers — Pain: “Etsy and Shopify inventory never sync right; I oversell items I don’t have.” Unmet because tools are built for big retail and are too expensive or complex for small Etsy sellers. Idea: Lightweight real-time sync app tailored to crafters.
  2. Last-Mile Delivery Transparency — Pain: “Customers keep asking where their package is — our delivery partners’ tracking is awful.” Unmet due to local couriers lacking tracking APIs. Idea: Plug-and-play tracking dashboard aggregating local courier data for merchants.

  … up to 5 items total.

- Copy the prompt

```
**Input**
Share a few details to ground the search:
- What **industry or domain** are you interested in exploring?
- Are you looking for **B2B or B2C** problems?
- (Optional) Any **geography or niche** focus (e.g. “North American pet tech”)?
If you’re unsure, I can simulate realistic inputs for a founder exploring early-stage prod
uct ideas.
---
**Process**
1. If context is missing, I’ll ask a few quick questions to clarify before scanning.
2. I’ll simulate scanning online communities (e.g., Reddit, Indie Hackers, Facebook groups
, etc.) related to your chosen industry.
3. I’ll identify the **Top 5 recurring pain points** that remain unsolved or underserved,
including:
   - Description of the pain (in users’ words if possible)
   - Why it remains unmet (e.g., tools too expensive or non-existent)
   - A product or service idea that could address it
---
**Deliver**
You’ll receive a structured list of 5 real-sounding, market-tested problem statements — ea
ch with a context snapshot and idea angle.
**Reflection:** Which of these pains feels most *alive* or personally energizing to solve
— and why?
```

- 💡Pro tip
  - Once a problem sparks your curiosity, validate it by searching live Reddit or Indie Hackers threads — real comments reveal how urgent it truly is
- Internal metadata
  - Source / Author: Prompt influenced by “Problem-Finding” (Surges/Bookspotz, 2025)
  - License / Date: bookspotz.com, 2025
  - Original Quality Score / Rationale: 21/25 — Excellent for idea discovery via community pain signals; adaptable across industries but benefits from niche input to avoid generic outputs

17. Unique Value Proposition (UVP) Crafter

- Category: Positioning & Pitch
- Purpose & outputs
  - Purpose: Clarify your startup’s core message in one tight sentence so investors, customers, and partners instantly know who it’s for, what it does, and why it’s different
  - You’ll get:
    - A crisp UVP that states audience, problem, category, and unique value
    - Ready-to-use copy for homepage hero, deck opener, and outreach

    - An optional alternate that tests a different positioning angle
  - Example output line: “For remote team leads who struggle to keep projects on track, Alignly is the only collaboration hub that turns every meeting into automatic action plans.”

- Full example output
  - “For freelance designers who struggle with managing client payments, PaySimple is the only invoicing platform that automates the entire client payment process – from invoice to tax prep – in one click.”

- Copy the prompt

```
## Input
We’ll craft a one-sentence Unique Value Proposition (UVP). First, answer these briefly:
1) Product/service name + 1-2 line description
2) Primary customer/user (who they are + core need)
3) The problem you solve + your unique differentiator
If you lack any of the above, say “simulate realistic inputs for my business type.”
**Adaptive flow:**
- If any answers are missing, ask me only the missing questions (max 3), then PAUSE.
- After I reply, CONTINUE automatically to produce the Deliverables below.
---
## Process
- Convert inputs into the proven UVP structure:
  “For **[target customer]** who **[has this problem]**, **[Product]** is the only **[cate
gory of solution]** that **[key benefit or differentiator]**.”
- Tighten wording for clarity, specificity, and punch (no jargon).
- Validate uniqueness: ensure the differentiator is explicit and valuable.
- (Optional) Provide 1 polished alternative angle if helpful.
---
## Deliver
- ✅ Primary UVP (1 sentence)
- ✅ Optional alternate version (1 sentence)
- ✅ 1-line rationale: why this works for your target
**Reflection (one question):** Which part of the UVP feels most true or least true — and w
hy?
```

- 💡Pro tip
  - Use your reflection to run a quick A/B test with 3 target customers or advisors: whichever version they can repeat back accurately after one read wins

- Internal metadata
  - Source / Author: Structured per UVP formula from Bookspotz (2025), originally popularized by Geoff Moore
  - License / Date: bookspotz.com / 2025
  - Original Quality Score / Rationale: 23/25 — Clear, time-tested structure; results depend on strength and specificity of the differentiator provided

18. SEO Affiliate Review Outline

- Category: SEO / Content & Social
- Purpose & outputs
  - Purpose: Help founders or creators write a credible, SEO-friendly review that informs readers, builds trust, and drives affiliate conversions — without sounding like a sales pitch
  - You'll get:
    - A structured, SEO-optimized review outline ready to expand into a full article
    - Tone and section flow calibrated for both trust and conversion
    - Honest framing that motivates readers to click your affiliate link
  - Example output line: "Breville Barista Express Review – Is It Worth It in 2025 for Beginner Home Baristas?"
- Full example output
  - Title: "Breville Barista Express Review – Is It Worth It in 2025 for Beginner Home Baristas?"
  - Introduction: "If you're dreaming of café-quality espresso at home, you've probably heard of the Breville Barista Express. But at its price, is it worth it? Verdict: It's a game-changer for serious beginners who want control and consistency — but skip it if you need something ultra-simple or budget-friendly."
  - Features & Benefits: Built-in Grinder → Freshest espresso in one machine. Temperature Control → Smooth, non-bitter shots.
  - Pros/Cons Table: Pros — Café-quality results, durable build. Cons — Learning curve, higher price.
  - Comparison: Vs. Gaggia Classic Pro — Breville is more beginner-friendly but pricier.
  - Conclusion: "If you value craft and quality, the Barista Express is worth it. Ready to brew better? Try Breville ➜ (affiliate link)."

- Copy the prompt

```
**Input**
Before we start, tell me:
1. What's your **niche or audience** (e.g., home fitness, SaaS tools, beauty tech)?
2. What's the **product name** you want to review?
3. (Optional) Any quick facts — price range, standout features, or why you picked it?
If you provide none, I'll simulate a realistic affiliate review for a mid-priced consumer
product in your niche to show structure and flow.
**Process**
1. Draft an honest, conversion-optimized article outline for your review using SEO best pr
actices.
2. Structure it with these sections:
   - **Title:** Catchy, includes "Review" and "Worth It?"
   - **Introduction:** Hook, pain/desire, and early verdict ("Yes, if…" / "No, if…").
   - **Features & Benefits:** 5 key features, each tied to user benefit.
   - **Pros & Cons Table:** Clear contrast of strengths and drawbacks.
   - **Ideal User:** Who it's for and not for.
   - **Comparison:** One key competitor.
   - **Conclusion & CTA:** Verdict summary + affiliate disclosure.
3. Ensure tone is expert yet friendly, building reader trust.
4. Format with H2/H3 SEO headings and concise bullet points.
**Deliver**
- Full review outline (or short draft under each section) ready to publish or expand.
- Honest, persuasive framing that builds credibility.
- Balanced verdict that motivates readers to click your affiliate link.
Reflection:
👉 Which part of the outline (features, pros/cons, or verdict) feels most aligned or leas
t convincing — and why?
```

- 💡Pro tip
  - Once the outline feels right, expand one section (for example, "Features & Benefits") into full paragraphs and test it with a real reader to check that it sounds natural, not promotional

- Internal metadata
  - Source / Author: Alex Dunlop, "Niche Authority Affiliate Review" framework (Vibe Coding)
  - License / Date: July 2025
  - Original Quality Score / Rationale: 25/25 — Extremely detailed and refined; strong structural clarity; encourages honesty for trust-based conversion

19. “Signature Service” Productization

- Category: Product & GTM Strategy
- Purpose & outputs
  - Purpose: Turn your existing freelance or consulting service into a premium, branded “Signature Service” with a clear name, structure, and method — so clients instantly understand the value and you can confidently charge higher prices
  - You’ll get:
    - A complete, branded Signature Service blueprint ready for sales pages or proposals
    - A structured client delivery model that feels premium and repeatable
    - A unique proprietary method you can name, trademark, or build content around
  - Example output line: “The Viral Content Engine — a 4-phase system that turns your social posts into a predictable lead machine.”
- Full example output
  - For “writing social media posts,” Name: “The Viral Content Engine”.
  - Outcome: “Clients get a month’s worth of engaging content that grows their followers and leads, every single month — hands-free.”
  - Phases:
    1. Audience Deep-Dive — research client’s audience and competitors
    2. Content Strategy Blueprint — develop content themes and voice guidelines
    3. Content Creation Factory — produce 30 posts with captions and graphics
    4. Engagement Optimization — schedule posts and monitor engagement, adjust next batch accordingly
  - Proprietary Process: “ACE Framework (Analyze, Create, Engage)” — a system combining data analysis with creative storytelling

- Copy the prompt

```
**Input**
Before we begin – a couple quick questions so I can tailor this:
1. What core service do you currently offer? (e.g., social media content, leadership coach
ing, funnel design)
2. What price range would you like to sell it for as a premium offering?
3. Who’s your ideal client or audience?
If you provide none, I’ll simulate realistic inputs for a small B2B service business.
**Process**
Using your inputs (or simulated ones):
1. Craft a compelling, branded **name** for your Signature Service (e.g., “The Growth Engi
ne” or “Clarity Catalyst”).
2. Define the **transformational outcome** (the dream result your clients achieve).
3. Outline 3-5 **pillars or phases** with short descriptions.
4. Specify tangible **deliverables** under each phase.
5. Create a distinct **proprietary framework or method** that sets it apart.
Then summarize it into a clear, founder-ready “productized service blueprint” you can use
for sales and marketing.
**Deliver**
- Service Name
- Core Outcome (Dream Result)
- 3-5 Phases (with mini-descriptions + deliverables)
- Proprietary Method / Framework
- 1-sentence differentiator you can use in your pitch
**Reflection:**
Which part of this offering feels most distinctively *you* – and which feels the most gene
ric? Why?
```

- 💡Pro tip
  - Once you’ve defined your Signature Service, rewrite your website headline and proposal intro around the outcome (not the process) — that’s what sells the premium
- Internal metadata
  - Source / Author: Adapted from Alex Dunlop’s “Signature Service Design”
  - License / Date: July 2025
  - Original Quality Score / Rationale: 25/25 — Exceptionally well-structured; forces unique value articulation at each step, ideal for freelancers or founders productizing services

20. Economic Moat Analysis

- Category: Metrics & Strategy
- Purpose & outputs
  - Purpose: Quickly assess how defensible your business is by evaluating its four classic moats — and identify the single biggest opportunity to make it harder to copy
  - You'll get:
    - A moat-by-moat diagnostic across Brand/IP, Switching Costs, Network Effects, and Cost Advantages
    - A strategic lens on how to protect your position as you scale
    - One clear moat priority to focus on next
  - Example output line: "Network Effects: 1/5 — Weak. Improve by adding a peer leaderboard that gains value as more users join."
- Full example output
  - Intangible Assets: Score 2/5 — recognizable brand in a niche, but no patents or exclusive content. Improve: invest in proprietary training content and pursue a patent for the AI algorithm.
  - Switching Costs: Score 3/5 — moderate lock-in from project history, but easy export. Improve: add deep workflow integrations and analytics that are hard to migrate.
  - Network Effects: Score 1/5 — each customer uses it in isolation. Improve: introduce community forum or benchmarking where value grows with more clients.
  - Cost Advantages: Score 2/5 — slight benefits from cloud scale; competitors similar. Improve: optimize infra and seek exclusive partnerships for cheaper data sources.
  - Overall: focus near-term on IP and switching costs to protect from copycats and price wars.

- Copy the prompt

```
**Input**
Describe your business in one sentence – what it does, who it serves, or what market it's
in.
Example: "We're a B2B SaaS platform that helps construction companies manage projects more
efficiently."
If you'd like, include your website or current stage (idea, MVP, growth).
If I provide none, simulate realistic inputs for a tech-enabled startup at the early-growt
h stage.
---
**Process**
1. Evaluate your business across four key moats (from Warren Buffett's framework):
   - **Intangible Assets (Brand, IP)**
   - **Switching Costs**
   - **Network Effects**
   - **Cost Advantages**
2. Score each moat from 1-5 (weak to strong).
3. Provide a one-line rationale and one suggestion to strengthen it.
4. End with a short overall defensibility summary and your top moat to prioritize next.
---
**Deliver**
Return the output in a clear table like this:
| Moat Type | Score (1-5) | Rationale | How to Strengthen |
|------------|--------------|------------|-------------------|
| Intangible Assets | 3 | Brand known in niche, but limited IP | File trademark, build uni
que dataset |
| Switching Costs | 2 | Easy for users to switch | Add deep workflow integrations |
Finally, summarize:
**Overall Defensibility:** short paragraph + top moat to focus on next.
**Reflection:** Which moat score surprised you most – and why? What does that reveal about
your growth strategy?
```

- 💡Pro tip
  - Revisit your moat scores every 6–12 months — the biggest strategic advantage often shifts as you grow
- Internal metadata
  - Source / Author: Prompt based on Alex Dunlop's "Economic Moat Audit" (Reddit, Jul 2025)
  - License / Date: Public community prompt, July 2025
  - Original Quality Score / Rationale: 23/25 — Insightful strategic lens, adaptable to most startups, clear structure, highly relevant to founders seeking defensibility

21. Startup Corporate Formation Checklist

- Category: Legal & Compliance
- Purpose & outputs
  - Purpose: Get a clear, step-by-step checklist of essential legal documents, agreements, and filings required to form your startup — tailored to your location and near-term plans
  - You'll get:
    - A region-specific formation roadmap with documents and filings
    - Clear "why it matters" notes for each requirement
    - Optional next-step suggestions for fundraising, hiring, or compliance
  - Example output line: "IP Assignment Agreements — ensure the company owns all code and creative assets from founders or contractors."
- Full example output
  - Checklist Example:
    - Reserve Business Name & Register Company — File Articles of Incorporation with Delaware Division of Corporations. This legally creates the company and registers your chosen name.
    - Employer Identification Number (EIN) — Obtain from IRS. Needed for banking, taxes, hiring.
    - Founders' Agreement & Equity Split — Clarify ownership and roles; prevents future disputes.
    - Bylaws (Corporation) — Define governance rules (board structure, voting, etc.).
    - IP Assignment Agreements — Each founder assigns any created IP to the company.
    - Stock Option Plan — Prepare if you plan to grant stock options to employees.
    - State Business License — Apply for state and local business licenses.
    - Privacy Policy (if fintech) — Required if handling user financial data.
    - Open Business Bank Account — Keeps finances separate and builds credit.

- Copy the prompt

```
**Input**
Tell me where you're incorporating (e.g., "Delaware, USA" or "Ontario, Canada") and your n
ear-term plans (e.g., "two co-founders splitting equity and raising a seed round," "hiring
in California," or "building a fintech app handling user data").
If you're not sure yet, I'll simulate a realistic founder scenario for your type of busine
ss so you still get a complete checklist.
**Adaptive Questioning (if missing context)**
1. Where do you plan to incorporate your company?
2. What are your short-term business plans (e.g., raising funds, hiring, handling user dat
a)?
3. Are you forming a corporation, LLC, or another entity type (if known)?
*(I'll wait for your answers before generating your tailored checklist.)*
---
**Process**
Using your inputs (or realistic defaults if none), I'll:
1. Identify required incorporation and registration filings for your region.
2. Add internal governance and founder documentation (e.g., bylaws, IP assignments).
3. Include optional but recommended items based on your plans (e.g., privacy policy, stock
options).
4. Explain briefly why each step matters.
---
**Deliver**
A clear, jurisdiction-specific **Startup Formation Checklist** covering:
- Legal filings (e.g., incorporation, tax IDs, licenses)
- Internal docs (e.g., bylaws, founder agreements, IP assignments)
- Optional/recommended extras for your context
- A short rationale for each
To close, I'll ask:
> Which part of this checklist feels most surprising, essential, or unclear — and why?
```

- 💡Pro tip
  - After generating your checklist, schedule a 30-minute consult with a startup lawyer or local business registry to validate the 2–3 highest-risk items before you file anything
- Internal metadata
  - Source / Author: Adapted from Founder Institute's Prompt Library (Legal & Equity section) — fi.cofi.co
  - License / Date: March 2025
  - Original Quality Score / Rationale: 21/25 — Practical and clear; strong educational value for first-time founders, though regional completeness may vary

22. “Elephant in the Room” Investor Q&A

- Category: Fundraising Prep
- Purpose & outputs
  - Purpose: Surface the toughest questions investors will ask — before you’re in the room — so you can strengthen weak spots and build trust in your pitch narrative
  - You’ll get:
    - A tough-love investor lens on your current pitch
    - A clear FAQ of objections to preempt in your next meeting or deck
    - A reality check on your biggest credibility gap
  - Example output line: “Competition: What stops Shopify or Upwork from launching this same model?”
- Full example output
  - Investor Questions:
    1. Market Adoption Risk: “Will conservative farmers actually use an app for tractor-sharing? How will you convince them to trust and adopt this new model?”
    2. Supply Constraint: “If demand surges, do you have enough tractor owners on board? What if growth outpaces supply of tractors?”
    3. Competition: “What prevents a major equipment company or a well-funded startup from copying this model and crushing you? Where is your moat?”
    4. Unit Economics: “Have you proven the unit economics? Can you take a cut and still make it worthwhile for both parties, especially if you need local agents or support?”
    5. Team Experience: “None of the founders have agriculture or logistics background – why are you the right team to solve this? Have you brought on advisors from the industry?”
  - Red Flag to Address: Low repeat usage — “Farmers might only need extra tractors seasonally. How do you ensure repeat business and not just one-time rentals?”

- Copy the prompt

```
**Input**
Briefly share your one-line pitch or short summary (what you do, for whom, and your tracti
on or stage if known).
If you don't have one yet, I'll simulate a realistic early-stage startup example for this
exercise.
**Adaptive Questioning (if missing context):**
1. What problem does your startup solve (in one line)?
2. Who is your target customer?
3. What's your current traction or stage (idea, prototype, revenue, etc.)?
(Once you answer, I'll continue automatically.)
---
**Process**
1. Step into the mindset of a skeptical investor hearing your pitch for the first time.
2. Identify 5-6 hard questions or concerns they'd likely raise — spanning product, market,
traction, team, competition, or model.
3. Highlight one *"red flag to address upfront"* — the issue most likely to undermine conf
idence.
---
**Deliver**
- A numbered list of investor-style questions (blunt, concise, and specific).
- Each question tagged by theme (e.g. Market Adoption, Team Credibility, Competitive Moat)
.
- A final "Red Flag to Address" section calling out the most urgent credibility gap.
If I provide no input, simulate a startup such as "an AI platform that matches small e-com
merce brands with on-demand marketing experts."
End by asking:
**Reflection:** Which of these questions feels most true or uncomfortable — and what story
or data could you use to turn it into confidence?
```

- 💡Pro tip
  - Once you have your "elephants," turn each one into a slide, proof point, or crisp answer — the best founders don't hide their weaknesses; they preempt them

- Internal metadata
  - Source / Author: Adapted from Founder Institute "Elephant Identifier" prompt (Pitching module, Apr 2025) via fi.cofi.co
  - License / Date: April 2025
  - Original Quality Score / Rationale: 24/25 — Highly effective for simulating investor skepticism across key dimensions (team, market, competition, economics). Near-perfect for pitch stress-testing

23. Lead Magnet Brainstorm & Outline

- Category: Marketing – Website / Conversion
- Purpose & outputs
  - Purpose: Help you rapidly design a high-value lead magnet that attracts your ideal audience and captures qualified emails by solving a real, urgent problem connected to your product
  - You'll get:
    - 5 lead magnet ideas tailored to your product and audience
    - A clear outline (title + sections) for the best concept
    - A ready-to-brief content plan you can turn into a downloadable PDF
  - Example output line: "E-commerce Holiday Marketing Checklist – Boost Your Q4 Sales."
- Full example output
  - Idea Brainstorm:
    1. "E-commerce Holiday Marketing Checklist – 10 Steps to Boost Sales in Q4."
    2. "Facebook Ads Budget Planner (Spreadsheet Template)."
    3. "Product Description Copywriting Swipe File."
    4. "5 Email Subject Lines with 60%+ Open Rates (PDF Guide)."
    5. "Year-End Store Audit Worksheet."
  - Best Idea Chosen: E-commerce Holiday Marketing Checklist – Boost Your Q4 Sales
  - Outline:
    1) Prep in Sept — optimize site speed, plan promo calendar
    2) Optimize Listings in Oct — refresh product descriptions with holiday keywords
    3) Launch Nov Deals — checklist for Black Friday ads, email sequence tips
    4) Last-Minute Shoppers in Dec — retargeting ad tips, urgency tactics
    5) Post-holiday Follow-up — turn buyers into repeat customers in Q1

- Copy the prompt

```
**Input**
Tell me briefly:
1. Who your target audience is (e.g., “freelance designers,” “fitness-minded moms”)
2. What your business or product does (1-2 lines)
3. Any focus or problem area you’d like the lead magnet to solve (optional)
If you provide none, I’ll simulate realistic examples for a typical early-stage startup.
---
**Process**
1. Brainstorm 5 short, high-value lead magnet ideas (checklists, templates, or mini-guides
) that solve an urgent problem for your audience and align with your business domain.
2. Pick the most compelling one and outline:
   - A strong, benefit-driven title
   - 3-5 concise sections or points it would cover
3. Present results in a simple table with two columns: *Idea* | *Value/Outcome*.
4. End with one interpretive reflection question.
---
**Deliver**
Output the brainstorm table and full outline for the top idea.
Then ask:
> “Which idea feels most on-target — or surprisingly off — and why?”
```

- 💡Pro tip
  - Once you’ve tested your top idea, reuse the same prompt to outline the next two ideas — it’s a fast way to A/B test which lead magnet converts best
- Internal metadata
  - Source / Author: Prompt based on “Lead Magnet Creator” (Bookspotz, 2025) – bookspotz.com
  - License / Date: Not specified (Bookspotz internal pack, 2025)
  - Original Quality Score / Rationale: 22/25 — Clear, conversion-focused, adaptable across industries; slightly limited originality but excellent structure and practicality for founders

24. Key Hire Role Prioritization

- Category: Ops & Hiring
- Purpose & outputs
  - Purpose: Quickly identify and justify which roles your startup should hire next — based on your top goals and current team skill gaps — so you can make confident, data-informed hiring decisions
  - You’ll get:
    - A clear, ranked Role Prioritization Matrix to guide near-term hiring
    - Justifications you can share with co-founders or investors

    - Visibility into hidden capability gaps that may block growth
  - Example output line: “Growth Marketer — to 3x user base; High impact on acquisition; Hire Q1; Urgency: High.”

- Full example output

  - Role | Reason for Priority | Expected Impact | Timeframe | Urgency
  - Mobile App Developer | No mobile app yet; key to reaching Android users (Goal: Android app) | High — unlocks new user segment & revenue | Q1 (start ASAP) | High
  - Growth Marketer | Need rapid user base growth; no one dedicated to growth experiments | High — could 3x user acquisition if effective | Q1–Q2 | High
  - Customer Success Lead | Founders handling support now; support quality affects retention | Medium — improves retention and frees founders’ time | Q2 | Medium
  - UI/UX Designer | Usability okay but could improve; prepping for Series A polish | Medium — better UX → conversion lift, stronger investor impression | Q2 | Medium
  - DevOps Engineer | Recent outages; no infra specialist | Medium — ensures uptime as we scale | Q3 | Low

- Copy the prompt

```
**Input**
Share:
1) Your top 2-3 business goals for the next 12 months.
2) A short description of your current team and their main skills.
If you provide none, I’ll simulate realistic goals and a team makeup for a typical early-s
tage startup to illustrate the process.
---
**Adaptive Questioning (if context missing)**
Before I start, can you tell me:
- Top priorities for the next year (e.g., “grow revenue 3x, launch Android app, improve re
tention”)?
- Which roles/skills are currently covered on your team?
(Once you answer, I’ll generate your tailored hiring plan automatically.)
---
**Process**
1) Analyze your goals and existing skills to spot capability gaps.
2) Propose 5-7 roles aligned to your growth priorities.
3) Rank each by Reason for Priority, Expected Impact, Timeframe to Hire, and Urgency Level
(High/Medium/Low).
4) Flag quick wins (unlock multiple goals) vs. strategic hires (prevent future bottlenecks
).
---
**Deliver**
Return a table with columns:
Role | Reason for Priority | Expected Impact | Timeframe | Urgency
Then ask a single reflection:
> Which role feels most urgent — or least aligned with where you’re truly heading — and wh
y?
```

- 💡Pro tip
  - Based on your reflection, take the most urgent role and draft a one-page scorecard (mission, top 3 outcomes, must-have skills) today; for the least aligned role, refine its scope or remove it from this quarter's plan
- Internal metadata
  - Source / Author: Inspired by Founder Institute's "Role Prioritization Matrix" prompt — fi.cofi.co
  - License / Date: Mar 2025
  - Original Quality Score / Rationale: 23/25 — Nicely structured output, relevant for most startups, easy to read and justify; limited mainly by niche-context depth

25. Second-Order Consequence Analyzer

- Category: Founder Decision-Making
- Purpose & outputs
  - Purpose: Help founders make smarter strategic decisions by seeing beyond immediate results — mapping how today's choices ripple through future consequences, revealing hidden risks and opportunities
  - You'll get:
    - A structured consequence map for each option (immediate → 2nd order → 3rd order)
    - Identification of hidden risks and opportunities often missed in quick decisions
    - A concise, principle-based recommendation for long-term alignment
  - Example output line: "Option A builds strategic IP but shortens runway; Option B preserves cash but risks losing core learning."
- Full example output
  - Decision: "Should we hire a full-time CTO or continue with contract developers for the next year?"
  - Option A (Hire CTO) — Immediate: Pro: dedicated tech leadership (strategy and faster decisions). Con: +$150k/yr salary added to burn. Second-order: attract better engineers (talent magnet), build core IP in-house; but higher burn shortens runway (fundraise ~3 months sooner if market is tough). Third-order: stronger investor confidence and potential valuation lift; if wrong hire, replacement is costly. Recommendation: Lean Option A — higher cost now but stronger foundation for scale and investor confidence.
  - Option B (Outsource Dev) — Immediate: Pro: cost flexibility. Con: lack of internal ownership. Second-order: slower delivery, less vision alignment. Third-order: longer runway but weaker tech depth and tougher technical due diligence.

- Copy the prompt

```
**Input**
Describe your fork in the road:
- What's the decision? (e.g., whether to hire a full-time CTO or outsource development)
- Option A:
- Option B:
If you don't provide details, I'll simulate a realistic startup scenario for this type of
decision.
**Process**
1. For each option, list **immediate consequences** (first-order).
2. Explore **second-order effects** — what those first consequences lead to next.
3. Add **third-order effects** if relevant — the "results of results."
4. Highlight **hidden risks or opportunities** that might not be obvious.
5. End with a short **recommendation** on which path seems better long-term and why.
**Deliver**
A clear, founder-friendly comparison showing ripple effects for both paths — immediate, se
cond-order, and third-order — ending in a brief strategic recommendation.
If context is missing, I'll first ask:
1. What's the main decision or trade-off you're considering right now?
2. What are the two main options you're weighing?
3. What stage is your company in (e.g., pre-seed, early growth, scaling)?
Once you answer, I'll continue automatically.
**Reflection:**
Which ripple effect feels most surprising or underappreciated — and what might that reveal
about your priorities or blind spots?
```

- 💡Pro tip
  - Run this exercise for any "tough fork" — hiring, fundraising, pricing — and revisit your consequence map 30 days later to see which assumptions held true

  - Original Quality Score / Rationale: 24/25 — Excellent structure for exploring ripple effects; forces deep, multi-layered strategic thinking for founders

26. Ogilvy-Inspired Website Conversion Audit

- Category: Marketing & Copy Optimization
- Purpose & outputs
  - Purpose: Quickly diagnose and upgrade your website's core messaging using proven Ogilvy principles so visitors understand the offer, feel why it matters, and are nudged to take the next step
  - You'll get:
    - A crisp 15-point scorecard with concrete comments and a prioritized fix list

    - A paste-ready “100/100” homepage or landing copy rewrite aligned to one conversion goal
    - Three fast A/B test ideas with what to measure
  - Example output line: “Overall Score: 78/100; biggest gains: stronger benefit-led headline, clearer CTA, add proof stat.”

- Full example output
  - URL Analyzed: https://example.com
  - Overall Score: 78/100
  - Score Breakdown (sample):
    - Product Positioning — 6.0 — Clear offer but unclear who it’s for
    - Headline — 5.0 — Weak benefit; not curiosity-driven
    - Call-to-Action — 4.5 — CTA buried in page
  - Top 3 Areas to Improve:
    1) Strengthen headline clarity and promise
    2) Add emotional storytelling to humanize the value
    3) Sharpen CTA to guide users to one next step
  - Rewrite (100/100 Example): Full hero, benefits, proof, and CTA rewrite applying all principles

- Copy the prompt

```
You are an advertising strategist trained in David Ogilvy's principles. Your job is to au
dit and uplevel my website or landing page copy for clarity, persuasion, and conversion.
**Adaptive Questioning (answer briefly; then continue automatically):**
1) What URL should we analyze (or paste the main copy)?
2) Who is the primary audience/persona?
3) What is the #1 goal for this page (e.g., demo request, trial, email signup)?
— If I provide none, simulate realistic inputs for a B2B SaaS landing page selling workfl
ow automation to ops leaders with a "Start Free Trial" goal.
**Input**
- Page: A URL (preferred) or pasted copy. If a URL is provided and browsing/extraction is
n't possible, use the visible copy I paste; if none, simulate.
- Context (optional): product name, short one-liner, proof assets (logos, stats, testimon
ials), and any legal constraints.
- Audience & Goal: who the page is for and the single conversion goal.
- Constraint: Ignore nav/footer/cookies/blog; focus on hero + body copy.
**Process**
1) Extract the main marketing copy from the provided source (or simulate).
2) Score the copy out of 100 using these 15 Ogilvy-inspired principles (~6.7 pts each). F
or each, give a short comment:
   1. Product Positioning (what/for whom/why)
   2. Unique Benefit (clear, specific core benefit)
   3. Headline (benefit-led, specific, or curiosity)
   4. Reader-Focused (you > we; pains/goals)
   5. Clear Tone (plainspoken, concrete)
   6. Simple Language (no jargon/filler)
   7. Evidence (facts, stats, testimonials, logos)
   8. Emotion/Story (human angle, stakes)
   9. Structure (skim-friendly hierarchy)
   10. Call-to-Action (one obvious next step)
   11. Visuals/Captions (copy supports/labels visuals)
   12. Testability (chunks suitable for A/B tests)
   13. Length (right for complexity)
   14. Attention-Grabbing (strong opening hook)
   15. Repetition (repeat key benefits strategically)
3) Return a **Score Breakdown table**: Principle | Score | Comment.
4) Identify the **Top 3 Improvement Areas** (ranked) with the "why" behind each.
5) Provide **targeted edits** (quick copy fixes) for those areas.
6) **Rewrite the page** to aim for **100/100**, including:
   - Hero: headline, subhead, primary CTA (and optional secondary)
   - 3-5 benefit bullets tied to outcomes
   - One short proof block (fact, testimonial, logo caption, or metric)
   - Skimmable section headings
   - Clear final CTA
7) Provide **3 A/B test ideas** (e.g., alt headlines, CTA text, proof placements) with si
mple success metrics.
8) Close with a 1-sentence positioning summary.
**Deliver**
- Overall Score (0-100)
- Score Breakdown Table (15 rows)
- Top 3 Improvement Areas (ranked)
- Targeted Edits (quick wins)
- Complete 100/100 Rewrite (ready to paste)
- A/B Test Ideas (with metric)
- Positioning Summary (1 line)
**Reflection (answer in 1-2 sentences):**
Which part of the new copy feels most true — or most off — for our audience, and why?
```

- 💡Pro tip
  - Use your reflection answer to pick the first A/B test: if the headline felt “off,” test two headline variants; if proof felt weak, test a bold metric block vs. testimonial near the CTA

  - Source / Author: Shared by Rewind (Ottawa SaaS company) — inspired by David Ogilvy’s advertising framework (Cult Method, 2024)
  - License / Date: 2024 (framework inspiration); attributed public share
  - Original Quality Score / Rationale: 25/25 — Clarity 5, Adaptability 5, Specificity 5, Refinement 5, Relevance 5

Final Guideline

This resource is designed to spark strategic thinking and experimentation with AI tools across key startup functions. Founders and teams are encouraged to adapt, iterate, and personalize the prompts to suit their unique business models, customer segments, and growth goals. The real value lies in testing these ideas in context—so use them as a launchpad, not a finish line.

For best results:

- Treat prompts as starting points, not prescriptions.
- Align AI use with your brand voice and customer experience.
- Revisit and refine based on performance and feedback.
- Innovation thrives on iteration. Let these prompts help you build smarter, faster, and more creatively.

Information Validity Statement
