EXECUTIVE SUMMARY

30

OVERALL SCORE

F

Critical issues detected

90-DAY SNAPSHOT

291,695	0.69%	0	87
Total Sessions	Engagement Rate	Conversions Tracked	Organic Clicks (90d)

⚠ **CRITICAL: 99.1% of Sessions Are Bot Traffic From China**

288,911 out of 291,695 sessions originate from China with a 0.42% engagement rate. This is almost certainly automated bot/crawler traffic, not real users. Your true audience is approximately **2,000–2,500 real sessions** over 90 days.

⚠ **CRITICAL: Zero Conversion Tracking — Stripe Payments Are Invisible**

56 sessions came from checkout.stripe.com (return traffic after payment), yet GA4 records 0 conversions. No key events are configured. Revenue is being generated but completely unmeasured.

! **WARNING: 18 Keyword Cannibalization Issues — SEO Signals Split**

GSC shows 18 queries where multiple pages compete for the same ranking. With only avg position 20.6, these signals are being diluted rather than consolidated.

TRAFFIC OVERVIEW

Sessions by Country — Bot-Adjusted View

□□ China (BOT TRAFFIC) — 288,911 sessions — 99.1%

Engagement rate: 0.42% · Recommend immediate bot filtering

□□ United States (Real Traffic) — 2,026 sessions — 0.69%

Engagement rate: 39.7% — high quality

□□ Pakistan 580 sessions

Engagement rate: 75.7% — likely dev/team traffic

□□ Singapore 396 sessions

Engagement rate: 4.3% — possibly bot/scraper

Real Traffic Sources (Bot-Filtered)

Google Organic	819 sess
Direct	1,438 (/) sess
juristai.org (referral)	92 sess · 77% eng
github.com (referral)	60 sess · 68% eng
checkout.stripe.com	56 sess · paying users!
LinkedIn	30 sess

Device Breakdown (All Traffic)

Desktop	290,744 sessions · 0.77% eng
Mobile	947 sessions · 49.2% eng
Tablet	4 sessions · 75% eng

⚠ 99.7% desktop is bot signal — real users would show 60–70% desktop. Mobile engagement (49%) is healthy when filtering bots.

CONVERSION ANALYSIS

Grade: F — No Conversion Tracking Configured

GA4 shows **0 conversions** across all 291,695 sessions. No key events have been marked as conversions in the GA4 property. The site has active Stripe billing (evidenced by 56 return sessions from checkout.stripe.com) but these purchases are entirely invisible to analytics.

Visible Conversion Funnel

Page Views	295,832
↓ 45.8% scroll to bottom	
Scroll Events	135,443
↓ drops to 0.16%	
User Engagement	3,340
↓ 0.16%	
Form Starts	473
↓ Missing: form_submit	
Form Completions	NOT TRACKED
↓ 0 measured conversions	
Purchases (Stripe)	COMPLETELY INVISIBLE

Stripe Payment Evidence

✓ Payment Activity Detected

56 sessions from `checkout.stripe.com` — users completing Stripe checkout and returning to the app. These are paying customers.

64.3% engagement rate on these sessions (quality traffic)

✗ Revenue Attribution: 0%

No GA4 purchase events. No ecommerce tracking. Transaction IDs: empty. Purchase revenue recorded: $0.

Action Required: Implement Stripe webhook → GA4 measurement protocol OR add GA4 tracking to post-payment success page.

TOP LANDING PAGES (ENGAGED SESSIONS)

/dashboard	92% eng · 51 sess
/dashboard/cases	93% eng · 15 sess
/login	78% eng · 55 sess

/caseflow	89% eng · 18 sess
/law (browse)	66% eng · 76 sess

Insight: Users ARE engaging — but measurement is broken

Dashboard pages show 92%+ engagement. Login shows 78%. These are returning, active users — the product is working. The problem is entirely in analytics configuration, not product-market fit.

SEO PERFORMANCE

1.64%
Avg CTR

20.6
Avg Position

Top Performing Queries

Query	Clicks	Impressions	CTR	Position	Notes
litigai	22	123	17.9%	3.3	Brand · strong
alien enemies act judge ruling	8	623	1.28%	1.0	Pos. 1 but low CTR — title/meta issue
ennis mcwhorter	6	99	6.1%	8.6	Case-specific · long tail
lis pendens	5	91	5.5%	1.0	Legal term — high intent
juristai	4	81	4.9%	6.7	Competitor brand traffic
pro se legal ai	2	2	100%	23	High intent · core ICP keyword
legal ai for pro se	1	7	14.3%	52.1	ICP keyword · buried — needs work

18 Keyword Cannibalization Issues

Multiple pages compete for the same queries, splitting link equity and confusing Google. The extensive case law database (e.g., "commonwealth v. pownall 278 a.3d 850") generates 100s of impressions per query cluster but near-zero clicks because pages aren't optimized. Consolidate or canonicalize overlapping legal content pages.

Opportunity: ICP Keywords Are Ranking Nowhere

"Pro se legal ai" and "legal ai for pro se" — the core buyer keywords — rank at positions 23 and 52 with minimal impressions. LitigAI's actual competitive advantage is underrepresented in search. Build dedicated landing pages for these terms.

MARTECH STACK ASSESSMENT

Detected Technologies

- **Google Analytics 4** — Installed · Misconfigured
- **Stripe Billing** — Active · Revenue flowing
- **Google Search Console** — Verified · Data flowing
- **GTM / Tag Manager** — Not detected
- **CRM / Hubspot** — Not detected
- **Heatmaps / Session Recording** — Not detected
- **Cookie Consent Banner** — Not detected
- **LinkedIn (Referrals)** — Traffic source · No pixel
- **juristai.org Integration** — Referral partner · High quality

GA4 Event Tracking Quality

Event	Count	Users	Key Event	Assessment
page_view	295,832	285,492	Auto	✓ Working
scroll	135,443	132,681	Auto	✓ Working
form_start	473	91	No	Tracked, not a key event
form_submit	0	—	Missing	✗ Not tracked — critical gap
click	101	50	No	Generic — needs specific labels
purchase / sign_up	0	—	Missing	✗ Not tracked — revenue blind
user_engagement	3,340	1,167	Auto	Low vs sessions — bot skew

TOP ISSUES — PRIORITY RANKED

P0 — CRITICAL Conversion Tracking **Effort: Medium**

No conversion events or key events configured in GA4

You cannot measure ROI, user acquisition cost, or product performance. All paid/organic effort is unjustifiable without conversion data.

P0 — CRITICAL Data Quality **Effort: Low**

288,911 bot sessions from China contaminating all reports

Every aggregate metric is meaningless. Real engagement rate is ~35–40%, not 0.69%. Add GA4 filter to exclude China traffic or implement server-side bot detection.

P0 — CRITICAL Revenue Attribution **Effort: Medium**

Stripe payments not reported to GA4 — revenue is completely dark

56 confirmed Stripe return sessions with no purchase events. Add GA4 ecommerce tracking via Stripe webhooks or success page tracking.

P1 — HIGH Form Tracking **Effort: Low**

form_start fires (473 events) but form_submit is missing

Signup/contact funnel is half-measured. Can't calculate form completion rate or optimize the registration flow.

P1 — HIGH SEO **Effort: High**

18 keyword cannibalization issues diluting organic authority

Multiple legal content pages competing for identical queries. Consolidate, canonicalize, or build content hubs around clustered topics.

P2 — MEDIUM SEO / ICP **Effort: Medium**

Core ICP keywords ("pro se legal ai") ranking at position 23–52

The highest-intent keywords for LitigAI's core audience are buried. Dedicated landing pages with proper optimization could capture 500–2,000 monthly visitors.

P2 — MEDIUM MarTech **Effort: Low**

No heatmap/session recording tool — UX optimization is blind

No Hotjar, Microsoft Clarity, or FullStory detected. Can't see where users drop off, rage-click, or get confused on critical pages.

P2 — MEDIUM Compliance **Effort: Low**

No cookie consent banner detected — potential GDPR/CCPA exposure

GA4 runs without consent management. For a legal tech company serving US users (including CA) and international users, this is a credibility and compliance risk.

30/60/90 DAY RECOMMENDATIONS

30 DAYS — QUICK WINS

1. **Add GA4 filter: exclude China**
   Admin → Data Filters → Create Internal Traffic filter or geographic exclusion. Immediately fixes all engagement metrics.
2. **Mark form_start as key event**
   GA4 Admin → Key Events → mark form_start. Instant visibility into signup funnel intent.

3 **Install Microsoft Clarity (free)**
Free heatmaps + session recordings. Integrate with GA4. 30 min setup.

4 **Add form_submit tracking**
Push custom event on registration/contact form success. Closes the funnel gap.

60 DAYS — CORE FIXES

5 **Stripe → GA4 purchase tracking**
Option A: Add GA4 measurement protocol event from Stripe webhook. Option B: fire purchase event on post-payment redirect page. Mark as key event.

6 **Build ICP landing page**
Dedicated page targeting "pro se legal AI", "AI legal research tool", "legal AI for self-represented". Target top 10 positions.

7 **Resolve cannibalization (18 issues)**
Audit top 18 clusters in GSC. Add canonical tags or consolidate thin case pages into category hubs.

8 **Optimize CTR for Position 1 pages**
"Alien enemies act" ranks #1 but has 1.28% CTR (should be 20-30%). Rewrite title tag and meta description to be click-worthy.

90 DAYS — SCALE & OPTIMIZE

9 **Implement GTM for scalable tracking**
Move all GA4 events to GTM. Add LinkedIn Insight Tag, retargeting pixels. Enables marketing channel expansion.

10 **Add cookie consent (Cookieyes/Osano)**
Legal tech credibility + GDPR/CCPA compliance. Shows clients you practice what you preach on privacy.

11 **Set up GA4 Audiences for retargeting**
Create audiences: pricing page visitors, dashboard users, form starters. Enable Google Ads remarketing once conversion tracking works.

12 **Build attribution model review**
Once conversions are tracked, run data-driven attribution comparison. Understand juristai.org referral value vs organic search.

ADVERSARIAL REVIEW — CHALLENGES TO THESE FINDINGS

Challenge 1: Is the China traffic actually bots?

The 0.42% engagement from 288,911 Chinese sessions is highly suspicious, but could theoretically be: (a) Chinese researchers accessing US case law, (b) SEO scrapers, (c) datacenter traffic, (d) legitimate miscategorized VPN traffic. However, the scale (99.1% of all sessions), desktop-only pattern, and near-zero engagement strongly suggest automated traffic. Recommendation: check server logs to confirm browser fingerprints.

Challenge 2: Could conversions be tracked elsewhere?

It's possible LitigAI tracks conversions in Stripe's dashboard, or in a separate internal analytics system not reflected in GA4. The 0 conversions finding only means GA4 isn't measuring them — the business may have revenue data we can't see. This audit focuses on GA4 and GSC; a complete picture would require access to Stripe MRR data.

Challenge 3: Is juristai.org traffic competitive or collaborative?

The juristai.org referral traffic (92 sessions, 77% engagement) could be a partnership, not competition. Both appear in GSC data as related brands. This needs clarification from the client — if it's a sister product or referral arrangement, it changes the attribution story significantly.

Challenge 4: What's missing from this audit?

We could not inspect the live tracking implementation directly (the site returned minimal text — likely a React/Next.js SPA requiring JS execution). We don't have: server-side analytics, Stripe revenue data, email marketing data, paid ad performance, or user ID tracking data. The real picture may be significantly better or worse than what GA4 shows.
