Why This Audit?

Your systems have grown organically. Shopify handles the storefront, a custom PHP app manages specialized logic, Method handles check payments, HubSpot runs CRM — but how well do they actually talk to each other?

Before investing in changes, you need a clear picture of what you have, what's working, what's fragile, and what should change first. **This audit gives you that clarity.**

What We'll Review

Shopify Store + Apps
Theme architecture, installed apps, checkout customizations, storefront config.

Checkout & Payments
Checkout flow, payment gateways, custom checkout implementation.

PHP Application
Custom backend code review, integration points, data flows, API connections.

Method Integration
Check payment workflows, Method portal, discount handling, sync logic.

HubSpot Integration
CRM data flows, deal/contact sync, invoice handling, bi-directional data.

All Integration Points
How systems connect, where data lives, what's automated vs manual.

What You'll Receive

Current State Architecture Map
Visual diagram of all your systems and how they connect — a single source of truth your team can reference.

Integration Inventory
Detailed documentation of every integration: what data moves, how it moves, what triggers it.

⚠ Gap & Risk Analysis
What's broken, fragile, or slowing you down — prioritized by business impact.

Recommendations Report
Prioritized roadmap of improvements with rough effort estimates for confident planning.

How It Works

1. **Kickoff & Access**
   30-min kickoff call. You grant read access to Shopify, codebase, Method, and HubSpot.
2. **Deep Dive Review**
   Our team audits each system: store configuration, custom code, integration logic, data flows.
3. **Analysis & Mapping**
   We build the architecture map, identify gaps and risks, develop prioritized recommendations.
4. **Presentation & Handoff**
   60-min findings call, Q&A, and complete documentation handoff.
